

Payment Reminder App

Estimated working hours: 8 Hours

Timeline : 4 Days

Overview

Payment Reminder is to allow you to keep an eye on your payment by sending daily payment reminder notifications.

Notifications will be sent daily until you mark the payment as paid.

Objectives

- User signup using the name, email, address, etc.
- Login user with credentials
- Users can add necessary details including title, description, and due date
- Users can also edit and delete (soft delete) the payment from the list
- Users can also mark the payment as paid.
- Send notifications to users daily till payment mark as paid (use firebase)

Suggested architecture

- Develop backend API using Node js (if needed)
- Use Firestore as a Database
- Use firebase auth for authentication and users

Acceptance Criteria

Keep in mind the following as acceptance criteria

- Application should be secure
- Use Google cloud firebase where possible
- Frontend should be on ReactJS
- Code should be well written and commented with proper folder structure
- Application should be well tested and error free
- Application interface should be clean and pixel perfect.
